

The Middlesex County Mosquito Commission will be spraying adulticide for the control of adult mosquito populations on Thursday, September 3, 2015 between 7 p.m. and midnight.

The spraying will include areas along Route 130 South from Community Park to Blackhorse Lane and also neighborhoods on either side of Church Lane and Old Georges Road to Farrington Lake. Rain date is Friday, September 4.

In order to reduce the number of nuisance and vector mosquitoes, the following adult mosquito product will be applied:

- Etofenprox (Zinevex ® E4 RTU)

The U.S. Environmental Protection and Rutgers University has approved recommended these mosquito control products for residential mosquito control and considers them to pose no questionable health risk when applied according to label directions. The Commission has notified municipal officials, health officers and police of these plans. Neither the USEPA nor NJ Department of Environmental Protection (NJDEP) requires relocating or taking special precautions during spraying with this product. All applications will be according to product labeling.

Residents can take the following precautions to reduce exposure:

- Pay attention to notices about spraying found through newspapers, websites, automated phone messages or notices distributed by municipal, county or state agencies.
- Plan your activities to limit time spent outside during times of possible insecticide treatments.
- Move your pets, their food and water dishes inside during ULV application. Also bring clothing and children's toys inside.
- Stay away from application equipment, whether in use or not.
- Whenever possible, remain indoors with windows closed and with window air conditioners on non-vent (closed to the outside air) and window fans turned off during spraying.

- Avoid direct contact with surfaces that are still wet from pesticide spraying. Do not allow children to play in areas that have been sprayed until they have completely dried (approximately one hour).
- If you must remain outdoors, avoid eye and skin contact with the spray. If you get spray in your eyes or on your skin, immediately flush and rinse with water.

Treatments for adult mosquitoes will be done on streets on a limited and localized basis within the specified area. Treatment time for a specific street is not possible. If the conditions are not ideal, the treatment will not be conducted.

The Commission operates a message machine 24 hours a day/7 days a week for individuals who cannot call its main number, (732) 549-0665, during business hours, 7 a.m. to 3:30 p.m.
